SHUTTLE RACKING

Problem

I need the best space utilisation both in height and floor area whilst retaining the ability to control stock.

Solution

Satellite/Shuttle racking is a dense storage system, equal to that of drive-in racking but offers quick product retrieval. Forklift truck does not enter the system.

- **Configured for Maximum storage, density and efficiency.**
- **Better space utilisation.**
- **System can be FIFO or FILO.**
- **Good occupancy rates can be achieved.**
- **Equipment lease options available.**
